Quality Policy and Objectives

The Photovoltaic Module and Power Plant Inspection Department of Airspect Limited provides inspection services for photovoltaic modules (solar panels) and power plants in accordance with applicable internationally recognised standards and associated regulatory documents.

With this quality policy statement, the executive management of Airspect Limited has defined the following mission, vision and objectives:

The mission of the Photovoltaic Module and Power Plant Inspection Department is to conduct professional, competent, credible, independent and impartial inspections of photovoltaic modules in accordance with applicable European or national regulatory documents.

The vision of the Photovoltaic Module and Power Plant Inspection Department is to be recognised and acknowledged by service users as a reliable and credible inspection body that, through its expertise, independence and responsibility, confirms itself as a reliable partner of all interested parties and entities in the field of photovoltaic modules and power plants.

The objectives of the Photovoltaic Modules and Power Plants Inspection Department include:

- ensuring impartial implementation of inspection activities towards all users of the services of the Photovoltaic Modules and Power Plants Inspection Department,
- implementing and continuously improving a quality management system based on the requirements of the international standard HRN EN ISO/IEC 17020:2012,
- ensuring that inspection procedures on behalf of the Photovoltaic Modules and Power Plants Inspection Department are carried out by appropriately trained inspectors who are free from any form of pressure from internal or external sources that could negatively affect their independence and impartiality in carrying out inspection activities,
- implementing inspection procedures that take into account the importance of the principle of confidential treatment of all data that the Inspection Department of Photovoltaic Modules and Power Plants collects on the users of its services during the implementation of inspection activities. Taking into account and not violating the previous principle, the Inspection Department of Photovoltaic Modules and Power Plants will provide all interested parties, upon request, with the necessary level of information on the functioning of the Inspection of Photovoltaic Modules and Power Plants, information on the inspection procedures of the Inspection Department of Photovoltaic Modules and Power Plants, the procedure for resolving appeals and complaints and related matters.

By adopting this Company Policy Statement, the executive management of the Photovoltaic Module Inspection Department and the power plant of the company Airspect Limited, represented by the undersigned director, demonstrates its permanent commitment and obligation to secure necessary resources that will ensure the permanent satisfaction of the principles and requirements for the management system in the inspection of photovoltaic modules and power plants, which are defined by the norm HRN EN ISO/IEC 17020, as well as other applicable valid normative regulations.
